Global warming is caused by an acute heating of the earth's atmosphere as a result of energy being trapped. Greenhouse gasses such as carbon dioxide and methane can cause the atmosphere to build up, leading to solar radiation becoming trapped within the earth like within a greenhouse, hence the name. Once these greenhouse gasses are released, they can contribute to the buildup of the atmosphere and work to trap more solar radiation within the earth. Global warming is also largely a result of the release of methane from cracks in the earth, landfill sites and through natural gas leaks. Cattle and other animals that produce methane can also contribute significantly to global warming, much of this has been a problem because of human animal farming which produces hundreds of cattle for the meat industry.

Sol. The order of the sentence after arrangement is **ADCGEBF**.

Deforestation means cutting down the forests that are home to the large chunks of oxygen giving trees, plants and numerous wild animals and birds. Human beings are cutting down forests around the world for various purposes. One of the main purposes of cutting vast forest areas is to use the land for agriculture. With the growing population there is a need to grow more crops to satisfy the demands of the people. This can only be done if we have enough land for agriculture. In an attempt to expand the agriculture sector and meet the demands of the people, we humans are cutting the forests. Forests are also being cut to build towns and cities to accommodate people and for setting up offices and factor.
