S26. Ans.(a)
Sol.
From only (A) we can say whether Z is a positive integer or not
Explanation: - If we look at Statement A, the condition of Z being a positive integer is being satisfied as putting a negative value will give \(Z^7 < Z\). Whereas, in the Statement B, putting both negative as well as positive values of Z will satisfy "\(Z^8 > Z\)". So, we conjecture that option ‘a’ is the correct option.

S27. Ans.(c)
Sol.
From (A) and (B) together value of \(4^\frac{1}{a} + 4^\frac{1}{b}\) can be find out.
Explanation: -
From (A) \(\frac{1}{a} + \frac{1}{b} = \frac{6}{5}\)
From (B) \(ab = 5\)
So, value of \(4^\frac{1}{a} + 4^\frac{1}{b}\) can be find out.

S28. Ans.(e)
Sol. We can’t find the answer as we don’t know the capacity of men. In statement ‘A’ and ‘B’, we are given about the capacity of women and children not about men.

S29. Ans.(e)

S30. Ans.(c)
Sol. When taking both statements together $3w = \text{odd number}$ and $2w = \text{Even number}$
A and B is possible only when $w$ is an integer
So, both the statements required to answer the question.
