 (c) CDBA (d) ABCD

Q3. A. The value of the mangrove swamps as breeding and nursery grounds for commercially valuable fishes, mollusks and crustaceans, far outweighs their value as firewood and fodder.
 B. The Gulf of Kutch supports a major fishery which is dependent to a very large extent on the mangrove/mudflat ecosystem and coral reefs.
 C. Thus the great variety of fishes available in local markets indicates the wealth of these waters. Wildlife tours to the Gulf began in 1985 and have helped to publicize the importance of the Gulf outside India.
 D. Similarly, the long-term values of the living coral formations far outweigh their short-term value as a source of cheap limestone for the cement industry.

Q4. A. The year 1999 results showed a consistency in the deer and fish sampling results when compared to the previous year's results.

B. Deer residing on the BNL site were found to contain concentrations of cesium-137 higher than those observed in offsite deer. Fish from the Peconic River collected at the BNL boundary continued to show a slightly elevated radionuclide content compared to control samples. Radionuclide levels in fish continued to decrease compared to historical values.

C. Brookhaven National Laboratory has a wildlife management program to protect and manage flora and fauna and their habitats.

D. The Laboratory's wildlife management strategy is based on an understanding of the resources onsite, ensuring compliance with applicable regulations, protecting and monitoring the ecosystem, research, and communication.
