Q.16 Choose the most logical order of the sentences from among the four given choices to construct a coherent paragraph.

In recent times, various environmental pollution incidents have occurred in our country. The attitude of some individuals taking matters lightly, such as disposing toxic waste into rivers, will destroy the ecosystem balance that we enjoy today.

- A) The increasing population in the country has also contributed to the rate of population growth and added waste and garbage.
B) plastic is the main contributor to waste in the world because it takes tens of years to decompose or rot.
C) Perhaps this happens due to a lack of education, but the crux of the matter is that every waste or disposal must be disposed of properly.
D) Additionally, plastic is commonly used only once and then serves no function and is thrown away haphazardly.

- Ans
- ☒ 1. ABCD
 - ☒ 2. DABC
 - ☒ 3. BADC
 - ☒ 4. CADB

Question ID : 630680371389
Option 1 ID : 6306801446869

Comprehension:

Read the following passage and answer the given questions:
Mathematics has often been described as the most perfect language of all, and for good reason. While traditional languages have their limitations in communicating complex ideas, mathematical symbols are universally accepted and can compress information in a way that no other language possibly could. In this sense, mathematics is a beautiful language that can lead us closer to absolute truth than any other means.
However, despite its importance, higher mathematics remains a minority language intelligible only to specialists. For the most part, people are only exposed to the simpler forms of mathematics, such as arithmetic, algebra, and geometry, which are taught in schools due to their everyday applications. But the good news is that the "new" mathematics is now being taught in many schools alongside the traditional approach. This approach allows younger students to see the subject as a whole rather than as a series of separate compartments, making it more intelligible and engendering more interest among those whose natural bent is in the direction of the arts.
Mathematics has a rich history and has grown up independently in various parts of the world. From the Greek schools of geometers to the Hindu-Arabic numbers system, the Arab world, and Europe, great minds have advanced mathematical propositions over the centuries. Today, mathematics is an indispensable tool of progress, and both "pure" and "applied" mathematics have their place. Pure mathematics reaches conclusions by means of the deductive process, and may be independent of need. Applied mathematics consists of developments to meet the requirements of science and technology.
In conclusion, mathematics is a language that is essential to our understanding of the world. It is the spearhead of natural philosophy and has led to great advancements in science, technology, and beyond. While higher mathematics may remain a minority language, it is becoming more widely taught and understood, and its importance cannot be overstated. Ultimately, mathematics is a beautiful language that allows us to reach closer to absolute truth than any other means.
