## SECTION B - Very short answer questions of 2 marks each.

| Q. No. | Answer/Solution | Marks |
| :---: | :--- | :--- |
| 21 | Takes a number which is not a perfect square but is a composite number. <br> For example, 6. <br> Assumes $\sqrt{ } 6=\frac{a}{b}$, where $b \neq 0, a$ and $b$ are co-primes. <br> Writes $b \sqrt{ } 6=a$ and squares on both sides to get $6 b^{2}=a^{2}$. <br> Writes that as $a^{2}$ is divisible by 2 and 3 which are both prime numbers, $a$ is <br> also divisible by both 2 and 3. Hence concludes that $a$ is divisible by 6. <br> Writes $a=6 c$, where $c$ is an integer and squares on both sides to get <br> $a^{2}=36 c^{2}$. <br> Replaces $a^{2}$ with $6 b^{2}$ from step 2 to get $6 b^{2}=36 c^{2}$ and solves it to get <br> $b^{2}=6 c^{2}$. <br> Writes that as $b^{2}$ is divisible by 2 and 3 which are both prime numbers, $b$ is <br> also divisible by both 2 and 3. Hence concludes that $b$ is divisible by 6. <br> Writes that 2 and 3 divide both $a$ and $b$ which contradicts the assumption <br> that $a$ and $b$ are co-prime and hence $\sqrt{ } 6$ is irrational. <br> Concludes that the given statement is false. | 0.5 |
| 22 | Assumes the time taken by Kimaya and Heena to reach the club house and <br> the badminton court as $t_{1}$ and $t_{2}$ respectively and frames the equation as: <br> $t_{2}-t_{1}=1$ <br> Assumes the distance travelled by Kimaya as $x$ m and by Heena as $y$ m and <br> frames the equation for the total distance travelled by Kimaya and Heena <br> together as: |  |

(Award full marks if any other pair of equations satisfying the above conditions is framed.)

## OR

i) Writes that the pair will have infinitely many solutions.

Reasons that as there are more than one points of intersection, the pair is of coincident or overlapping lines.
ii) Substitutes the values of the point of intersection $(6,0)$ in the equation of a line $a x+b y=c$ as:
$6 a+0=c$
or $a=\frac{c}{6}$
Substitutes the values of the second point of intersection $(0,2)$ in the equation as:
$2 b=c$
or $b=\frac{c}{2}$
Rewrites the equation of a line by substituting the values of $a$ and $b$ in terms of $c$ as:
$\frac{c}{6} \mathrm{x}+\frac{c}{2} y=c$
Simplifies the above equation by taking $c=1$ to find the equation of the line as $x+3 y=6$.
